AND PICKING

OF BOTTLED

BEVERAGES

Engineered Space Optimization

Bottle Flow

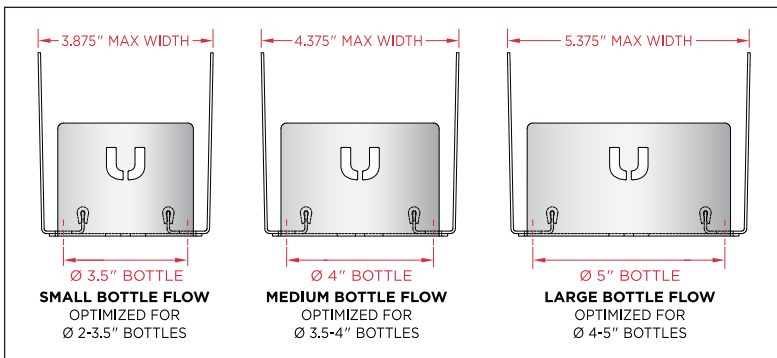

UNEX **Bottle Flow** is a gravity-fed shelving system designed for single-serve beverages such as wine, liquor, and beer. By using angled flow lanes, it keeps bottles automatically moving to the front for faster, safer, and more accurate picks.

Features:

- Can be integrated alongside SpanTrack
- Adjustable front bracket for pitch control
- Rubber bumpers in front bracket cushion impact and help protect bottle labels while picking
- UHMW edge guards line the inside rails for low-friction, consistent product flow
- Adjustable slots in the front and rear brackets allow for easy assembly
- Flared side angles minimize risk of label tear during product flow
- Available sizes to fit bay depths 36" - 54"
- Three Bottle Flow widths: Small, Medium, Large
- Hangers for Step, Box, and Structural Beams
